It is hard to over-emphasise the strength of life sciences in the London - Stansted - Cambridge corridor, from AstraZeneca’s global HQ moving to Cambridge to the Francis Crick Institute opening at Kings Cross.

Locations such as Harlow’s Enterprise Zone and Stevenage’s Bioscience Catalyst have the potential to play a central role in supporting the on-going growth of this globally significant cluster.

Overall there are 37 world class life sciences research institutes in the London-Stansted-Cambridge region, 1,400 life science businesses, accounting for 43,200 jobs and 20% of all England’s employment in this sector. The region’s growth is set to continue with at least 14,000 new jobs being generated in the life sciences sector before 2023.

This event launches major new research looking at:

- The scale and form of the sector’s growth in the region in the coming decade
- The key locations and investment opportunities to accommodate this growth

The event will also consider how to best attract and secure overseas investment, as well as how we deliver the right type of space for Life Sciences.
